PROFESSIONAL SUMMARY

B.Tech Information Technology graduate (2026) with hands-on experience building production-grade full-stack applications using the MERN stack, Docker, and CI/CD pipelines. Built an AI-powered unused package detection system supporting Node.js, Python, and Java with real-time dashboards, security scanning, and risk prediction. Passionate about clean architecture, developer tooling, and open-source. Actively seeking a software engineering role to build developer tooling, scalable APIs, or full-stack products in a fast-moving team.

TECHNICAL SKILLS

Languages: C, C++, Java, Python, JavaScript, TypeScript

Frontend: React.js, HTML, CSS, Tailwind CSS, Redux, Zustand

Backend: Node.js, Express.js, REST APIs, Socket.io

DevOps & Deployment: Docker, GitHub Actions (CI/CD), Vercel, Render, Netlify

Databases: MySQL, MongoDB

Tools: Git, Postman, Cloudinary, npm audit, Snyk

Concepts: OOP, DSA, OS, DBMS

PROJECTS

NewsPulse - RSS News Aggregator with Topic Clustering

2026

Tech: React.js (Vite), Node.js, Express.js, Python, MongoDB Atlas, GitHub Actions

- **Project Overview:** Full-stack news aggregator that ingests articles from 5 RSS sources (BBC, CNN, NPR, The Guardian, Al Jazeera), clusters related stories by topic, and displays them on an interactive timeline UI.
- Built a Python data pipeline (feedparser, trafilatura) to fetch feeds, deduplicate via SHA256 hashing, and extract full article text from raw HTML.
- Implemented a keyword-overlap clustering algorithm with BFS-based connected components to automatically group related articles into topic clusters.
- Built a Node.js/Express REST API serving articles, clusters, and timeline data to the frontend, with on-demand pipeline triggers.
- Automated recurring data ingestion via a GitHub Actions cron job (every 6 hours); deployed frontend on Netlify and backend API on Render.

Live Demo (Frontend): newspulse-rock.netlify.app | GitHub: github.com/sumit-walker/NewsPulse

Unused Package Detection System

2025

Tech: React.js, Node.js, Express.js, Python, Tailwind CSS, Chart.js, npm audit, Snyk API

- **Project Overview:** AI-powered dependency analysis tool that detects unused packages across Node.js, Python, and Java projects using language-specific analysis.
- Built a real-time dashboard with Chart.js, improving dependency analysis and visualization.
- Integrated Snyk API for security vulnerability scanning; flags CVE risks before they reach production.
- Integrated AI-powered dependency analysis using external APIs to identify potentially unstable or vulnerable packages.
- Supports safe removal with dry-run simulation and one-click rollback to prevent accidental breaking changes.

Live Chat Platform

2024

Tech: React.js, Node.js, Express.js, MongoDB, Socket.io, Zustand, Tailwind CSS, DaisyUI

- **Project Overview:** Production-ready real-time chat application with JWT-based authentication and live online presence indicators.
- Implemented global client state with Zustand, reducing prop-drilling and improving component re-render performance.
- Architected WebSocket event system enabling real-time message delivery using Socket.io.
- Deployed full-stack app (frontend + backend) on Render with environment-based config and zero-downtime restarts.

EDUCATION

Dr. Akhilesh Das Gupta Institute of Professional Studies (GGSIPU)

Delhi, India

Bachelor of Technology - Information Technology; CGPA: 7.6/10

2022 - 2026

Holy Convent Senior Secondary School

Delhi, India

XII - CBSE; Percentage: 78%

2022

ACHIEVEMENTS

- **InnovateNSUT'25 Hackathon - Developer Productivity Dashboard:** Built a full-stack dashboard as part of a 5-member team within a 24-hour sprint at NSUT, Delhi, competing against teams from across Delhi NCR.
 - Owned API and dashboard integration: connected the GitHub API to fetch live activity data and wired backend REST endpoints to React dashboard components using Zustand.

CERTIFICATIONS

- Certification in Data Structures & Algorithms by Udemy (2024).
- Certification in Full-Stack Web Development (MERN) by Apna College (2025).
